

Updated title

1 Properties of Probability

Definition 1.1 Random Experiment. An experiment where the outcome cannot be predicted with certainty.

Definition 1.2 Sample Space. The set of all possible outcomes of a random experiment is called a sample space, S (also called outcome space, or just space). $\blacklozenge$

1. Flip a coin and record the face that is showing:
2. Roll two dice and add the faces showing:
3. Flip two coins. Record the faces:
4. Flip two coins. Determine if they are the same:
5. Flip a coin until a heads appears. Record the number of flips needed:
6. Flip a coin until you get two heads in a row. Record how long (time) it takes:
